

Author: [@jengajojo](#) [@DAOplomats.eth](#)

Summary:

This proposal seeks to gather consensus from the DAO to increase the current onchain proposal quorum threshold from 40M UNI

Motivation:

In our post on ['Preparing the DAO for possible Governance attacks'](#) several delegates suggested exploring increasing the proposal threshold as a simple way to begin mitigating future attacks. In line with these suggestions, we want to gather consensus from the DAO on kickstarting the mitigation process by increasing the threshold from 40M to a higher figure. We have parallelly kickstarted a [discussion](#) to increase the VP of active delegates participating in the Delegate Reward initiative.

Specification:

Based on the screenshot shared by [@0xkeyrock.eth](#) we see that there is room to increase the onchain proposal quorum to 45-60M based on the current engagement levels

We would like to hear from delegates on which of these increases would be best given the current engagement levels as well as the ongoing incentivized governance initiative

Timeline:

This proposal would follow the normal governance timeline with the quorum being modified based on onchain vote

Cost:

There is no cost associated with this proposal

Voting Options:

- Increase quorum to 60M UNI
- Increase quorum to 50M UNI
- Increase quorum to 45M UNI
- Keep quorum unchanged
