After the successful launch of the dYdX Chain yesterday at 17:00 UTC, we are in the Post Genesis Phase & this involves two crucial stages;

Alpha Stage

· Network Gains Security

Beta Stage

· Limited Trading Enabled

The Alpha stage focuses on staking, stabilizing and securing the dYdX Chain

Staking DYDX directly contributes to dYdX Chain security. As more DYDX holders choose to stake their tokens to a diverse set of Validators, it becomes increasingly difficult for a coordinated attack

During the Alpha stage the dYdX Operations subDAO team will measure clear performance metrics to analyze the dYdX Chain's readiness;

Sufficient DYDX tokens are staked to secure the network

No further updates or fixes are needed

Among other benchmarks

The transition from the Alpha stage to the Beta stage hinges on a successful community vote via dYdX Governance, the stability and security of the dYdX Chain network and the readiness of the indexer infrastructure, among other factors.

Read the tl:dr on the Alpha stage
