Carbon DeFi POL

The <u>Bancor DAO vote</u> established a Carbon DeFi POL contract that is designed to receive surplus tokens from Bancor V3 and make them available in exchange for ETH. <u>Learn how to trigger</u>

Following the Bancor DAO vote, Carbon DeFi POL supports the option to sell ETH for BNT.

Price indicator will be using an exponential decay function where the price of the tokens reduces over time, which means the price will drop until an arbitrageur finds it attractive to interact with.
