## **AA14** initCode must return sender

The address of the smart account deployed with theinitCode provided does not match match thesender address provided in the user operation.

## **Possible solutions**

- · Verify that thesender
- · address was generated deterministically from theinitCode
- . (consider leveraging functions likegetSenderAddress)
- ٠ ١
- · Verify that the factory address in theinitCode
- is correct (the factory address is the first 20 bytes of theinitCode
- ).
- Verify that theinitCode
- is correct.
- If all else fails, investigate why theinitCode
- deploys to a different address than expected using tools likeTenderly
- ,
