whole\_Section\_wrapperdont\_have\_api\_sec\_start### Don't have an API key?

Start using this API in your app today. Get started for free dont\_have\_api\_sec\_end

#### Note

The estimate may be significantly more than the amount of gas actually used by the transaction, for a variety of reasons including EVM mechanics and node performance. Estimates are served directly from nodes, we're not doing anything special to the value so the rest of the network is likely seeing the same.

#### **Parameters**

```
    Object

      • The transaction call object* from
      o :
      DATA
      \circ\,\, , 20 Bytes - (optional) The address the transaction is sent from.
      • to
      o :
      DATA
      \circ\,\, , 20 Bytes - The address to which the transaction is directed to.
      • gas
```

٥	QUANTITY
0	<ul> <li>(optional) Integer of the gas provided for the transaction execution.</li> </ul>
o	eth_call
o	consumes zero gas, but this parameter may be needed by some executions.NOTE: this parameter has a cap of550 million
٥	Gwei per request. Reach out to us a <u>support@alchemy.com</u>
0	if you want to increase this limit.
0	gasPrice
o	:
0	QUANTITY
0	<ul> <li>(optional) Integer of the</li> </ul>
0	gasPrice
0	used for each paid gas.
0	value
٥	:
0	QUANTITY
0	• (optional) Integer of the value sent with this transaction
0	data
0	:
0	DATA
。 QUAI	<ul> <li>(optional) Hash of the method signature and encoded parameters. For details see Ethereum Contract ABI NTITY TAG</li> </ul>
	integer block number, or the string "latest" or "earliest", see the default block parameter

#### Note

- $\bullet \ \ eth\_estimateGas$
- will check the balance of the sender (to make sure that the sender has enough gas to complete the request). This means that even though the call doesn't consume any gas, the
- from
- address must have enough gas to execute the transaction.
- If no
- gas
- is specified geth uses the block gas limit from the pending block as an upper bound. As a result, the returned estimate might not be enough to execute the call/transaction when the amount of actual gas needed is higher than the pending block gas limit.

#### Returns

QUANTITY - the amount of gas used.

## **Example**

#### Request

alchemyweb3.js ethers.js web3.py cURL Postman SDK // Installation instructions: https://github.com/alchemyplatform/alchemy-web3 async function main () {// alchemy-token-api/alchemy-web3-script.js import {createAlchemyWeb3 }from "@alch/alchemy-web3" ;// Replace with your Alchemy API key: const apiKey = "demo" ;// Initialize an alchemy-web3 instance: const web3 = createAlchemyWeb3 (https://eth-mainnet.g.alchemy.com/v2{ apiKey } ,);// Query the blockchain (replace example parameters) const estGas = await web3 .eth .estimateGas ({from :"0xge61df" ,to :"0x087a5c" ,data :"0xa9059c" ,gasPrice :"0xa994f8" , })// Print the output to console console .log (estGas ); }main (); // Installation instructions: https://docs.ethers.io/v5/getting-started/#installing async function main () {const {ethers }= require ("ethers" );// Replace with your Alchemy API key: const apiKey = "demo" ;// Initialize an ethers instance const provider = new ethers .providers .JsonRpcProvider ('https://eth-mainnet.g.alchemy.com/v2{apiKey}' ,);// Query the blockchain (replace example parameters) const estGas = await provider
