api-endpoint)

• Authentication

API API Endpoint Copy https://api.clusters.xyz **APIKEY** You can get an API Key by visiting https://clusters.xyz/developer/api-keys If you have an API KEY, you can add it to the request headers like so: Copy fetch(URL,{ headers:{"X-API-KEY":"abc123"} }) Authentication Currently, this is only required for Managing Wallets. If you do not need to manage wallets via the API, you can ignore this. 1. Get signing message 2. Sign the message with an EVM or Solana wallet 3. Get authentication key with the signature of the signed message 4. Using authenticate key with endpoints that require wallet authentication Get Signing Message GET /v0.1/auth/message Get the signing message used for wallet signature authentication Example Copy curl-XGET'https://api.clusters.xyz/v0.1/auth/message' The message to sign and the corresponding signing date 200 ``` Copy { "message": "clusters.xyz verification\n\nBefore interacting with certain functionality, we require a wallet signature for verification\n\n2024-05-14T19:08:27.985Z", "signingDate":"2024-05-14T19:08:27.985Z", "signingDate":"2024-05-14T19:"27.985Z", "signingDate":"2024-05-14T19:"27.985Z", "signingDate":"2024-05-14T19:" 14T19:08:27.985Z" } Get Authentication Key POST /v0.1/auth/key Authenticate the ownership of a specific wallet Name Description signature Signed message signature signingDate Date given by signing message response type evm orsolana (wallet type used for signing) wallet Wallet that signed the message Example Copy curl--requestPOST\ --urlhttps://api.clusters.xyz/v0.1/auth/key\ --header'Content-Type: application/json'\ --data'{ "signature": "abc123", "signingDate": "2024-05-14T19:08:27.985Z", "type": "evm", Response The auth key used for authenticated responses Copy { "authenticationKey": Validate Authentication Key POST /v0.1/auth/validate Authenticate if a authentication key is valid or not Name Description HEADERX-AUTH-KEY Authentication key Example $Copy\ curl--request GET\ --url https://api.clusters.xyz/v0.1/auth/validate\ --header\ 'X-AUTH-KEY:$ Response The auth key used for authenticated responses 200 ```
