Installing PnP Web No Modal SDK

@web3auth/no-modal

<u>â</u>

- npm
- Yarn
- pnpm

npm install --save @web3auth/no-modal yarn add @web3auth/no-modal pnpm add @web3auth/no-modal

Consider adding@web3auth/base

to your projectâ

- npm
- Yarn
- pnpm

npm install --save @web3auth/base yarn add @web3auth/base pnpm add @web3auth/base This package gives access to common types and interfaces for Web3Auth. This comes in handy by providing you a standard way of importing the values you need to work with the SDKs. We highly recommend using it while working withtypescript .

Troubleshootingâ

Bundler Issues: Missing Dependenciesâ

You might face issues mentioning that certain dependencies are missing within the browser environment. These are node dependencies that need to be polyfilled in your application, to enable Web3Auth functionalities. Furthermore, your bundler needs to be reconfigured to use them while building the app. We have created guides for different bundlers to help you with this issue:

- Please check out our Webpack 5 Troubleshooting Guide
- Please check out our <u>Vite Troubleshooting Guide Edit this page Previous Web3Auth PnP Web No Modal SDKNext Initialize</u>
