getMaxPriorityFeePerGas - SDK

Returns a fee per gas (in wei) that is an estimate of how much you can pay as a priority fee, or "tip", to get a transaction included in the current block. This number is generally used to set the maxPriorityFeePerGas field in a transaction request.

Description

Returns a fee per gas (in wei) that is an estimate of how much you can pay as a priority fee, or "tip", to get a transaction included in the current block.

This number is generally used to set the maxPriorityFeePerGas field in a transaction request.

Response

Property Type Description Promise number Returns the fee per gas.

Example Request and Response

Prerequisite: You will need to install the Alchemy SDK before making requests with it.

The commands for installing it usingnpm oryarn are given below:

npm yarn npm install alchemy-sdk@latest yarn add alchemy-sdk@latest

Request

index.js // Imports the Alchemy SDK const {Alchemy ,Network }= require ("alchemy-sdk");// Configures the Alchemy SDK const config = {apiKey :"alchemy-replit" ,// Replace with your API key network :Network .ETH_MAINNET ,// Replace with your network };// Creates an Alchemy object instance with the config to use for making requests const alchemy = new Alchemy (config);const main = async ()=> {//Call the method to display the max priority fee per gas in wei const response = await alchemy .transact .getMaxPriorityFeePerGas ()//Logging the response to the console console .log (response) }main ();

Response

JSON 94000000

Code Sandbox

You can test out the getMaxPriorityFeePerGas method using the code sandbox below:

Use Cases

Here are some potential use cases for the getMaxPriorityFeePerGas method:

- · Setting optimal gas fees for transactions
- · : By using the
- getMaxPriorityFeePerGas
- method, developers can ensure that they set optimal gas fees for their transactions. This can help ensure that transactions are processed quickly and efficiently while minimizing user costs.
- · Automating gas fee calculations
- : Some applications may need to calculate gas fees for transactions automatically. By using the
- getMaxPriorityFeePerGas
- method, developers can automate this process and ensure that gas fees are always set at the optimal level.
- Monitoring network congestion
- : The value returned by
- getMaxPriorityFeePerGas
- can be an indicator of network congestion. Developers can use this information to monitor the network's health and adjust their gas fees accordingly.
- Providing transparency to users
- · : By displaying the current
- · getMaxPriorityFeePerGas
- value to users, developers can provide transparency and help users make informed decisions about their transactions.
