Greetings, community! I'm excited to discuss two pivotal ideas aimed at enhancing the user experience. Your insights and feedback are invaluable, so let's dive in!

1. Instant Deposits through Community Treasury Reserve:

Currently, deposits take around 30 minutes to process, primarily due to the bridging process. I propose using a portion of the community treasury to create a deposit reserve. This reserve would allow for instant account crediting post-deposit confirmation, potentially reducing the wait time from 30 minutes to about 1 minute.

## **Key Points:**

- Immediate improvement in deposit times.
- Enhanced appeal for new and existing users preferring guick transactions.

How do you feel about using the community treasury in this manner? Are there any concerns or suggestions for implementation?

1. Alternative Instant Deposit with a Fee:

As an alternative or addition to the above, dYdX could offer an "instant deposit" option with a nominal fee. Users opting for this would have their transactions processed instantly for a small charge.

Would you be willing to pay a small fee for instant deposits? If so, what do you think is a reasonable fee structure?

1. Simplified Rewards Conversion to USDC:

Regarding rewards, I suggest introducing an option to directly convert rewards into USDC within the user's account. This process would replace the current, more laborious method of transferring assets to an external exchange (like OKX), converting to USDC, and then redepositing.

## Benefits:

- · Streamlines the conversion process.
- Saves time and potentially reduces transaction fees.
- Offers convenience and efficiency to users.

What are your thoughts on direct conversion of rewards to USDC? Do you see any potential drawbacks or areas for improvement?

Both ideas above aim to significantly improve user satisfaction and operational efficiency. I'm eager to hear your perspectives, experiences, and any other suggestions you might have.
