Alchemy SDK vs. Raw API Methods

A list of all Alchemy SDK methods and their corresponding General API methods

Alchemy SDK Methods Raw API Methods Use Case SDK Core<u>call eth_call</u> - Also available on Polygon, Arbitrum, Optimism, Astar. Executes a new message call immediately without creating a transaction on the block chain. <u>estimateGas eth_estimateGas</u> - Also available on Polygon, Arbitrum, Optimism, Astar. Generates and returns an estimate of how much gas is necessary to allow the transaction to complete. The transaction will not be added to the blockchain. <u>findContractDeployer</u>

Finds the address that deployed the provided contract and block number it was deployed in getAssetTransfers alchemy getAssetTransfers - Transfers API The Transfers API allows you to easily fetch historical transactions for any address across Ethereum and supported L2s including Polygon, Arbitrum, and Optimism. getBalance eth getBalance ,getBalance (Solana) - Also available on Arbitrum, Polygon. Returns the balance of the account of a given addressgetBlock getBlock (Solana),eth_getBlockByHash_eth_getBlockByNumber Returns the block from the network based on the provided block number or hash, getBlockNumber eth blockNumber - Also available on Polygon, Arbitrum, Optimism, Astar. Returns the number of the most recent block, getBlockWithTransactions eth, getBlockTransactionCountByHash eth_getBlockTransactionCountByNumber Returns the block from the network based on the provided block number or hash. Includes fully transactions from the block, getCode eth getCode - Also available on Polygon, Arbitrum, Optimism. Returns code at a given address. feeData eth maxPriorityFeePerGas - Also available on Arbitrum, Astar. Returns the recommended fee data to use in a transaction. For an EIP-1559 transaction, the maxFeePerGas and maxPriorityFeePerGas should be used. For legacy transactions and networks which do not support EIP-1559, the gasPrice should be used. getGasPrice eth gasPrice - Also available on Polygon, Arbitrum, Optimism, Astar. Returns the current price per gas in weigetLogs eth getLogs - Also available on Polygon, Arbitrum, Optimism. Returns an array of all logs matching a given filter object. getStorageAt eth_getStorageAt - Also available on Polygon, Arbitrum, Optimism. Returns the value from a storage position at a given address, or in other words, returns the state of the contract's storage, which may not be exposed via the contract's methods. getTokenBalances alchemy getTokenBalances - Token API Returns token balances for a specific address given a list of contracts. getTokenMetadata alchemy getTokenMetadata - Token API Returns metadata (name, symbol, decimals, logo) for a given token contract address. getTransactionCount eth_getTransactionCount - Also available on Polygon, Arbitrum, Optimism. Returns the number of transactions sent from an address. getTransactionReceipt eth getTransactionReceipt - Also available on Polygon. Returns the receipt of a transaction by transaction hash. getTransactionReceipts eth_getTransactionReceiptsByBlock, alchemy_getTransactionReceipts An Alchemy Enhanced API that gets all transaction receipts for a given block by number or block hash. Supported on all networks for Ethereum, Polygon, and Arbitrum. send

Allows sending a raw message to the Alchemy backend. SDK NFTs NFT APlgetNftsForOwner getNFTs Gets all NFTs currently owned by a given address. getNftMetadata getNFTMetadata Gets the metadata associated with a given NFT. getContractMetadata getContractMetadata Queries NFT high-level collection/contract level information.getNftsForContract getNFTsForCollection Gets all NFTs for a given NFT contract.getOwnersForNft getOwnersForToken Get the owner(s) for a token. getOwnersForContract getOwnersForCollection Gets all owners for a given NFT contract.getSpamContracts getSpamContracts Returns a list of all spam contracts marked by Alchemy.isSpamContract isSpamContract Returns whether a contract is marked as spam or not by Alchemy. refreshContract reingestContract Triggers metadata refresh for an entire NFT collection and refreshes stale metadata after a collection reveal/collection changes. getFloorPrice getFloorPrice Returns the floor prices of a NFT collection by marketplace. computeRarity computeRarity Computes the rarity of each

attribute of an NFT. SDK Transact <u>getTransaction eth_getTransactionByHash</u> - Also available on Polygon, Arbitrum, Optimism, Astar.

<u>getTransaction</u> (Solana) Returns the information about a transaction requested by transaction hash or number. In the response object, blockHash, blockNumber, and transactionIndex are null when the transaction is pending. <u>sendTransaction eth sendRawTransaction</u> - Also available on Polygon, Arbitrum, Optimism, Astar.

sendTransaction (Solana) Creates a new message call transaction or a contract creation for signed transactions. sendPrivateTransaction eth_sendPrivateTransaction Send a single private transaction through Flashbots. Private transactions are sent directly to miners and not included in the public mempool. cancelPrivateTransaction eth_cancelPrivateTransaction Request to cancel private transactions on Ethereum that are sent via eth_sendPrivateTransaction. waitForTransaction

Returns a promise which will not resolve until specified transaction hash is mined. If confirmations is 0, this method is non-blocking and if the transaction has not been mined returns null. Otherwise, this method will block until the transaction has confirmed blocks mined on top of the block in which it was mined. SDK Notify Notify API getAllWebhooks team-webhooks This endpoint allows you to get all webhooks from every app on your team. getAddresses webhook-addresses Paginated endpoint to list all of the addresses a given Address Activity webhook is subscribed to. getNftFilters webhook-nft-filters Paginated endpoint to list all of the NFT filter objects a given webhook is subscribed to. update-webhook update-webhook Allows you to update the state of an existing webhook. Input parameters is a webhook ID or object, followed by exactly one of the Update objects listed below. create-webhook Create-webhook This endpoint allows you to create a webhook. delete-webhook Allows you to delete a webhook.
