Manual cleaning an instance from the previous deployment

In order to delete build artifacts anyone can run./rel/commands/clear_build.sh from the root project directory. It will delete these folders:

- delete_build
- &deps
- · directories
- · delete node modules located at
- apps/block_scout_web/assets/node_modules
- &apps/explorer/node_modules
- deletelogs/dev
- directory

•

You should also delete static assets (apps/block_scout_web/priv/static folder). Before rebuilding to apply changes to the front-end, run the previous command with-f flag:

./rel/commands/clear_build.sh -f
