I am aware I am being pushy but I believe the community sentiment and agreement to move forward on AAVE as collateral is in favor?

At minimum AAVE works like LEND in the collateral position;

- 1. Enable AAVE collateral (same parameters as LEND 50% LTV, etc)
- 2. Enable Deposit AAVE, receive aAAVE
- 3. AAVE cannot be borrowed
- 4. Create a script to convert aLEND to aAAVE for those assets already obligated/deposited as collateral
- 5. Stkaave, Aave and aAAVE = voting power

Are we missing something?

What are we waiting for? @stani
