Private Keys Module

The PrivateKeysModule module provides an interface for setting, getting and managing private keys for a ThresholdKey object.

To use the PrivateKeysModule in your Android project, you will need to import the module as follows:

import

com . web3auth . tkey . ThresholdKey . ThresholdKey ; import

 $com.\ web3 auth.\ tkey.\ Threshold Key.\ Modules.\ Private Keys Module\ ;\ Private Keys Module\ is\ a\ class\ that\ provides\ the\ following\ methods:$

Function Description Arguments Async return setPrivateKey Set private key to corresponding tKey thresholdKey: ThresholdKey, key: String?, format: String Yes Bool getPrivateKeys Get Private Keys thresholdKey: ThresholdKey No [String]] getPrivateKeyAccounts Get private Key accounts thresholdKey: ThresholdKey No [String]

setPrivateKey()

â

public static void setPrivateKey(ThresholdKey thresholdKey, @Nullable String key, String format, ThresholdKeyCallback callback)

Sets a private key for a ThresholdKey object.

Parametersâ
