# getFeeData - SDK

Returns the recommended fee data to use in a transaction. For an EIP-1559 transaction, the maxFeePerGas and maxPriorityFeePerGas should be used.

For legacy transactions and networks which do not support EIP-1559, the gasPrice should be used.

whole\_Section\_wrapperdont\_have\_api\_sec\_start### Don't have an API key?

Start using this method in your app today. Get started for free dont\_have\_api\_sec\_end

# **Description**

Returns the recommended fee data to use in a transaction. For an EIP-1559 transaction, the maxFeePerGas and maxPriorityFeePerGas should be used.

For legacy transactions and networks which do not support EIP-1559, the gasPrice should be used.

# Response

Property Type Description Promise object Returns an object with the fees

#### **FeeData**

response object parameters

Property Type Description maxFeePerGas number / string BigNumber - The maxFeePerGas to use for a transaction. This is based on the most recent block's baseFee. maxPriorityFeePerGas number / string BigNumber - The maxPriorityFeePerGas to use for a transaction. This accounts for the uncle risk and for the majority of current MEV risk. gasPrice number / string BigNumber - The gasPrice to use for legacy transactions or networks which do not support EIP-1559.

# **Example Request and Response**

Prerequisite: You will need to install the Alchemy SDK before making requests with it.

The commands for installing it usingnpm oryarn are given below:

npm yarn npm install alchemy-sdk yarn add alchemy-sdk

## Request

Here is an example of how to make a getFeeData request using the Alchemy SDK:

getfeedata.js // Imports the Alchemy SDK const {Alchemy ,Network }= require ("alchemy-sdk" );// Configures the Alchemy SDK const config = {apiKey :"alchemy-replit" ,// Replace with your API key network :Network .ETH\_MAINNET ,// Replace with your network };// Creates an Alchemy object instance with the config to use for making requests const alchemy = new Alchemy (config );const main = async ()=> {//Call the method to return the recommended fee data to use in a transaction. let response = await alchemy .core .getFeeData ()//Logging the response to the console console .log (response ) };main ();

## Response

Shell { lastBaseFeePerGas: BigNumber { \_hex:'0x0d9fbc42bf' , \_isBigNumber:true }, maxFeePerGas: BigNumber { \_hex:'0x1b98e0b47e' , \_isBigNumber:true }, maxPriorityFeePerGas: BigNumber { \_hex:'0x59682f00' , \_isBigNumber:true }, gasPrice: BigNumber { \_hex:'0x0da39585ec' , \_isBigNumber:true } }

## **Code Sandbox**

You can test out the getFeeData method using the code sandbox below:

## **Use Cases**

Here are some possible use cases for the getFeeData method:

- · Transaction fee estimation
- · : Developers can use the
- getFeeData
- method to estimate the fee required for a particular transaction. This information can be used to determine the optimal fee to set for a transaction, given the current network conditions.
- · Gas price monitoring
- : The
- getFeeData
- method can be used to monitor changes in the gas price of a blockchain network over time. This information can be used to adjust gas price strategies for applications, ensuring they stay competitive and cost-effective.
- Smart contract development
- : When developing smart contracts, developers need to ensure that their contracts operate within the gas limits of the network. The
- getFeeData
- method can be used to calculate the gas costs associated with specific operations, helping developers to optimize their contract code and stay within network constraints.

# **Related Methods**

Here are the methods related to getFeeData:

- getGasPrice
- : Returns the current price per gas in
