Proposal Name:
Preserve Privacy During Voting Period
Proposal Category:
Process
Abstract
Hide vote count and totals only during the voting period to allow voters to make up their mind individually before voting and prevent voter harassment. Everything is revealed at the end of the vote so there is full transparency. This will be tested for two months.
Motivation
There might be instances of AIP authors being unlucky because large holders decided to just follow another large holder or because one large holder decided to vote against the proposal early on thus making it look like the community is against the proposal. In an ideal world we want people to make up their mind about how they want to vote.
This will also stop voter harassment. If an AIP author knows certain wallet owners, this will prevent them from going after them during the voting period to try and get them to change their votes.
<u>@br00no</u> attempted a very similar version of this <u>here</u> which failed. The key difference here is that this is a two month trial. After the trial period is over, voting will go back to how it is now. Another AIP will be created towards the end of the testing period to make it permanent. People can vote as per their experience with the system. This is just a trial.
Rationale
We want AIP authors to get a fair shot when voters are considering their AIPs. It's currently too easy to follow the ongoing popular vote. This will be a short term test to see if voters are comfortable with a new voting system.
It's a two month period to ensure that everyone goes through at least a few voting cycles before making up their mind.
Benefit to ApeCoin Ecosystem
It'll give all AIP authors a fair shot at getting proposals passed. This way good projects that get unlucky because a whale
