joinSignature

Learn about the joinSignature utils method

Introduction

The joinSignature method is used to combine separate parts of an Ethereum signature into a single hex string. The signature parts must be in a specific order for this method to work.

Usage

This method should be used when you have separate parts of an Ethereum signature and you want to combine them into a single hex string.

Here's a simple code example to demonstrate how to use this method:

Javascript const {Utils} = require ("alchemy-sdk");// Expanded-format; this is the format Solidity and other tools often require let expanded = {r :"0x0ba9770fd8778383f6d56faadc71e17b75f0d6e3ff0a408d5e6c4cee3bd70a16",s

:"0x3574da0ebfb1eaac261698b057b342e52ea53f85287272cea471a4cda41e3466" ,recoveryParam :0 ,v :27 , };let flat = Utils .joinSignature (expanded);console .log (flat);//

0x0ba9770fd8778383f6d56faadc71e17b75f0d6e3ff0a408d5e6c4cee3bd70a163574da0ebfb1eaac261698b057b342e52ea53f85287272cea471a4cda41e34661b
