When I compile the tutorial code with nargo build

, I hit the following error.

error: cannot find storage in this scope ┌── /Users/anonymous/aztec-packages/yarn-project/noir-contracts/src/contracts/counter_contract/src/main.nr:49:24 | 49 | let counters = storage.counters; | ------- not found in this scope |

Could someone explain how "storage" get defined? Is it because every contract has it implicitly? If so, how come it doesn't work for me.

Thanks,

–h
