Hello, Edgar here, I'm a Solution Architect, Developer, and Project Manager, experienced in enterprise and government systems. The DAO I am a co-founder of (@ageofanura

) is also holder of BAYC318 +14k $APE and 10 Cryptoadz. With 15 years under my belt, I've had the opportunity to work with diverse areas, from ERP, CRM, Grants Management, Customer Portal, Electronic Bill Payment to Project Scoping, System Blueprinting & Architecture, and RFP / Proposal Management.

In the past two years, I have honed my skills in web3, specializing in smart contract development, UI design and web3/web2 backend integration. And most importantly I've immerssed myself in DAO tooling and DAO systems development. As a founder that is heavily involved in a decentralized organization, I've experienced firsthand the unique challenges we face, from lack of user-friendly experiences to inefficient management and tracking outcomes. To combat this, my team and I developed a proposal management and decentralized publishing system with configurable status flow and on-chain outcomes/transparency, using traditional accessible technologies like Typescript, ReactJS, NestJS and MongoDB. Our solution provides an ecosystem of familiar and custom products all accessible from a single point making DAO management and community engagement a one step exercise.

Please note that my aim here isn't to promote my project, but to convey my abilities and eagerness to leverage them for the benefit of $APE. I understand the power of $APE DAO and the potential it holds. I firmly believe that a billion-dollar organization like this should not rely on off-the-shelf toolsets that may not be designed for its particular needs, but instead deserve customized management tools and user experiences.

I would propose to work with the council, goverance group and community to draft a scoping document, complete with preliminary UI details and designs. This will help us delineate the specifications for a potential RFP, which can be opened for companies and builders to bid on. Of course the actual proposal would have a detailed set of specifics and objectives for the scoping exercise and we would work together to ensure that is complete and meets the needs of the community while also being simple and achievable.

Looking forward to the possibility of collaborating with the community.

Best regards,

Edgar

P.S. to counter being that guy with one post, I decided to doxx so that you know I'm serious.
