Quorum Developer Quickstart

Prerequisites

- [Docker and Docker-compose](#)
- [Nodejs](#)
- On Windows:* Windows Subsystem for Linux 2
-
    - Docker desktop configured to use the WSL2-based engine.

caution Ensure you allow Docker up to 4G of memory or 6G if running the privacy examples. Refer to theResources section in[Docker for Mac](#) and[Docker Desktop](#) for details.

Usage

To create the docker-compose file and artifacts, run:

npx quorum-dev-quickstart Follow the prompts displayed.

When installation is complete, refer toREADME.md in the installation directory for more information on your test network.
