Wallet Bundles

Users can group multiple wallets under one universal name in the most intuitive format yet.

- foobar/defi
- foobar/nfts
- foobar/solana
- foobar/ordinals

This combination of rivalrous onchain top-level namespace combined with flexible offchain secondary namespace makes a cluster both a unique digital asset and a highly useful universal profile. [Previous Multichain](#) [Next Antisquatting](#) Last updated5 days ago
