Perpie Grant Bi-Weekly Update

I. Executive Summary:

a) Roadmap Progress

- We have completed all the reading functions related to GMXv2, which are crucial for the proper integration of Perpie with the Protocol.

After completing the reading functions, we proceeded to write and implement the entire logic for orders, positions, and everything in between for GMXv2. During this process, we also improved the aggregation logic of Perpie.

Currently, our focus is on integrating our notification infrastructure with GMXv2 events. This will enable users to receive notifications for every action they perform related to trading with V2. This is the final step for GMXv2 integration!

b) Milestone/KPI Achievements

- No KPIs/Milestone achievements for the integration with V2, it's in progress yet not completed.

II. Current Progress:

Apart from the intense work on integrating with GMXv2, we have also launched Perpie to the public and developed additional features to enhance the overall product experience.

- Improved notifications parsing and service infra

- Added Native eth notifications

- Completed major step with GMXv2 integration (the entire write functionalities)

- Fixed rate limit issues around messages and updates with our users

- Built survey engine + improved broadcast messages
