Migrate to Besu

Migrate from a different Ethereum [execution client](#) to Besu to contribute to [client diversity](#) .

To migrate from a different client, [configure Besu as an execution client](#) and connect your [consensus client](#) to Besu instead of your original execution client.

To minimize downtime while [Besu syncs](#) and avoid downtime penalties, you can sync Besu with a new consensus layer instance. Once Besu has fully synced you can connect it to your existing consensus client.

Find guides to switch from specific clients on the [client diversity website](#) . [Edit this page](#) Last updatedonApr 18, 2024
