builder

community

So, we heard you want to run a builder! Tell us more :)

The [builder API spec[…](#)

ification](https://ethereum.github.io/builder-specs/) is open and every validator can select their own builders. However, there are still open questions that we need to resolve with the humans in the ethereum ecosystem to get a permissionless and fully decentralized design. Following [the plan](#) towards proposer/builder separation we are [researching and prototyping](#) solutions for decentralization. Coming next is the addition of independent block builders to the Flashbots relay. You can find the initial [Relay API specification here](#), which outlines how builders can interact with the Flashbots Relay.

Tell us more about who you are, what is your role in the ecosystem, how will you profit from running a builder, how are you going to contribute to answer the [open questions](#), in order to get us to the trustless proposer/builder separation. Leave a comment in this issue so we can talk about collaboration.
