Hey guys! I'm having an issue with my staked Eth. I managed to easily stake Eth using Lido on Ledger Live and received stEth tokens. Now, when I connect my Ledger Nano X to Curve/Yearn or any similar dApp they don't seem to detect my stEth balance. They only seem to detect the Eth balance on my wallet. I recently saw a video on YouTube explaining how to provide these stETH tokens on Curve and Yearn in order to earn more yields. Is this a wallet (Ledger Nano X) limitation? Why don't these platforms "see" the stEth in my wallet? How can I work around this? Or am I missing something here? Appreciate any feedback from the gurus here.
