During the process of the user depositing DAI into the DSR to obtain sDAI, the EventLog reported by the transaction did not appear in the ERC20 consensus below:

[> A token contract which creates new tokens SHOULD trigger a Transfer event with the

from address set to 0x0 when tokens are created.](ERC-20: Token Standard)

Therefore, BlockChain explorer, including etherscan CANNOT read the sDAI minting transaction in the "transfer list", Also affected are the transaction lists of tools such as wallets, data-script, SQL and so on…

I hope this bug can be corrected ASAP.

Thank you very much!
