How to add liquidity

Due to divergence loss , you are not guaranteed a positive return! 1. There are two places you can add liquidity to a position withinLiquidity Terminal 2. , in both locations clicking on theVertical Ellipsis (⋮) 3. button of the position you wish to add liquidity to will open a submenu (image 1). 4. ? 5. These locations are: 6. 1. In thePositions 7. 2. area of the Market Explorer (seeMarket Explorer Navigational Chart 8. 3.). 9. 4. In thePortfolio Positions 10. 5. area of your Portfolio (SeePortfolio Navigational Chart 11. 6.). 12. 7. 13. In both cases the menu is the same, selectAdd Liquidity 14. (image 2). 15. ? 16. The Add Liquidity Overlay will open, you can add liquidity in several ways… 17. By entering the amount you want to add in one of the fields underAmount to add 18. (image 3): 19. ? 20. By entering the balance you wish your position to increase to in one of the fields underFinal balance 21. (image 4): 22. ? 23. By typing the percentage of available funds you wish to add in the central field (image 5). 24. ? 25. Alternatively you can select max in any of the highlighted fields (image 6). 26. ? 27. In each case the number of tokens deposited will automatically adjust to match the required ratio for your position. 28. Once you are satisfied with your deposit values, clickDeposit 29. (image 7). 30. ? 31. Deposit Complete!   32. As you have added liquidity to your existir will not receive a new pool position NFT. Your existing NFT will represent your new position and in your wallet it will be displayed as a simple image with the warning "DO NOT BURN" (image 8). 33. ? 34. DO NOT 35. sell or burn this NFT. You can send it to another wallet to transfer your position, but (whale forbid) please don't burn or sell it, or you'll lose your liquidity! 36.
