AA13 initCode failed or OOG

OOG = Out Of Gas

The EntryPoint failed to create the smart account with theinitCode provided. There are two possible reasons:

- TheinitCode
- ran out of gas
- TheinitCode
- reverted during the account deployment process

Possible solutions

- Verify that the factory address in theinitCode
- is correct (the factory address is the first 20 bytes of theinitCode
-).
- Verify that theinitCode
- is correct.
- Check whether theverificationGasLimit
- is sufficient for theinitCode
- to complete without running out of gas.
- If the root cause is a revert, investigate why theinitCode
- reverts during the account deployment process using tools likeTenderly
- .
