# RPC Nodes

Introduction

Build on Gelato chains with access to enterprise-grade RPCs.

- Elastic, auto-scalable nodes that grow with volume
- Failover support for RPCs. Guaranteed uptime with redundancy across servers, data centers, and networks providing uninterrupted service to your users.
- Monitor your compute usage, throughput, requests and more with dedicated RPC dashboard on the Gelato RaaS Platform.
- Easily access multiple networks with a single RPC key.

Gelato RPC Nodes provide a fast and reliable production environment, enabling access to Gelato rollups via RPC. You can send transactions, deploy smart contracts, query blockchain data, and perform other operations without the need to run your own RPC node or manage infrastructure.
