Hey everyone. I created a tool this morning to help with my bookkeeping of snip-20 transactions. It's a very basic tool but has a couple useful features. One of which is particularly useful for collection creators which received mint proceeds in sSCRT. Simply fetch your history, then enter the contract address of your collection in the "sender" field. This will display all the transactions related to that collection, then you can export to CSV or XLSX for your convenience.

Posting here in case others might find it useful:

snip-20-transaction-history.vercel.app

Snip-20 History

Fetch transaction history for SNIP-20 tokens on Secret Network.
