Hey @rdugh,

Sorry about the confusion here. There are actually 2 -s flags that can be used in different parts of the command, the -s flag you're using is actually for the size of the node, you'll need to add a -s before "config" like so:

numerai node -s config -s mem-lg -p [path/to/code]

Also, apologies for the delay in my response, if you would like faster support I'd recommend heading over to our discord.

Hope this helps,

Noah
