Pet Shop Truffle Box¶

This box has all you need to get started with our Pet Shop tutorial .

Installation¶

1. Install Truffle globally.
2. npm
3. install
4. -
5. g
6. truffle
7. Download the box. This also takes care of installing the necessary dependencies.
8. truffle
9. unbox
10. pet
11. -
12. shop
13. Run the development console.
14. truffle
15. develop
16. Compile and migrate the smart contracts. Note inside the development console we don't preface commands withtruffle
17. .
18. compile
19. migrate
20. Run theliteserver
21. development server (outside the development console) for front-end hot reloading. Smart contract changes must be manually recompiled and migrated.
22. // Serves the front-end on http://localhost:3000
23. npm
24. run
25. dev

NOTE : This box is not a complete dapp, but the starting point for the Pet Shop tutorial . You'll need to complete that for this to function.

FAQ¶

- How do I use this with the EthereumJS TestRPC?
- It's as easy as modifying the config file
- . Depending on the port you're using, you'll also need to update line 16 ofsrc/js/app.js
- .
