Interoperability with WalletConnect in PnP Web Modal SDK

For enabling interoperability with Wallet Connect, ie. connecting your W3A generated wallet to other dApps which have Wallet Connect integration, you can use theshowWalletConnectScanner() method. This method uses the Wallet Connectcopy and paste flow, in which you can directly copy the QR Code details from a dApp likeOpenSea and paste in it your shown modal.

note This is a paid feature and the minimumpricing plan to use this SDK in a production environment is theGrowth Plan . You can use this feature in the development environment for free. info This uses theTorus EVM Wallet UI Plugin . Please install and configure the package before using this function.

showWalletConnectScanner()

â

Shows the Wallet Connect Scanner to connect with dApps having Wallet Connect login option. This is useful for interoperability with dApps having Wallet Connect login option.

Exampleâ

import

{

WalletServicesPlugin

}

from

"@web3auth/wallet-services-plugin" ;

const walletServicesPlugin =

new

WalletServicesPlugin ( ) ; web3auth . addPlugin (walletServicesPlugin) ;

// Add the plugin to web3auth

await walletServicesPlugin . showWalletConnectScanner ( ) ;Edit this page Previous Top-up Wallet Next Web3Auth PnP Web No Modal SDK
