How to Bundle a User Operation

To bundle a user operation, you need to use your [Pimlico API key](#) and make a JSON-RPC request as follows:

viem ethers-v5 ethers-v6 ```

viem import{ createPublicClient, http }from"viem"

constpimlicoApiKey="YOUR_PIMLICO_API_KEY_HERE" constchain="sepolia"// find the list of supported chains at https://docs.pimlico.io/bundler constpimlicoEndpoint=https://api.pimlico.io/v1{chain}/rpc?apikey={pimlicoApiKey}

constuserOperation=... constentryPoint="0x5FF137D4b0FDCD49DcA30c7CF57E578a026d2789"

constpimlicoClient=createPublicClient({ transport:http(pimlicoEndpoint) }) constresult=awaitpimlicoClient.request({ // @ts-ignore method:"pm_sponsorUserOperation", params: [userOperation, { entryPoint: entryPoint }] }) constpaymasterAndData=result.paymasterAndData

```
