Hello all, my name is Nicholas Harness and I'm the student president at the University Blockchain Alliance. UBA is a decentralized coalition of over 90 university blockchain clubs representing schools in 15 countries (these countries range from western nations such as the US and different countries in Europe to emerging market nations such as Brazil, India, and countries throughout Africa). I'm very interested in learning how the AAVE community best thinks AAVE could go about supporting students interested in the blockchain space as well as how you all would like to see students and universities contribute to AAVE and the general DeFi space. Also interested in learning about any specific roles you would like students to take a more active role in within the AAVE ecosystem. Very keen to hear ideas from Students, AAVE team members, community members and everyone else!
