Bridge

Let's try token bridging using the rollup bridge at https://bridge.ata.network . This bridge connects the Automata Testnet and its corresponding settlement layer, the Sepolia Testnet. It supports three token types: native, ERC20, and ERC721. Here's a simple guide on how to use it:

1. Connect your wallet to the desired network (Automata Testnet or Sepolia Testnet).
2. Access https://bridge.ata.network
3. in your browser.
4. Select the token type you want to bridge (native, ERC20, or ERC721).
5. ClickDeposit
6. if you want to bridge tokens from L1 to L2, chooseWithdraw
7. for the reverse operation.
8. Enter the amount of tokens you wish to bridge.
9. Confirm the transaction and follow any additional steps specified by your wallet.
10. Wait for the bridge confirmation, which may take some time.
11. Once confirmed, the bridged tokens will be available on the destination network.
12.
