Hello,

im living in a totalitarian country and I always have the fear that my USDC/USDT can be blocked. Yes I know that holding your keys with ETH/BTC is the best way but lets say you need to stable out your balance from risks.

Now, since USDC/USDT can be banned if owned myself in my own wallet. What happens if I deposit/lend it on Aave and receive AUSDT/AUSDC. Can that still be banned since its within a smart contract? Or what happens if the USDC/USDT is getting banned?

Best Regards
