Hi,

We have used a few smart contracts to interact with the Uniswap v2 router instead of a wallet, and those addresses can claim 400 UNI per contract. However, once when 400 UNI has been sent to the contract, we don't have the option to move that tokens, so they will stay locked in the contract.

Can you please pass those claimable UNI tokens to the contract owners instead if we provide contract addresses that are eligible to claim UNI?

Thanks,

Nenad
