Bribe Mechanics

The new V2 aims for a convenient governance system, eliminating the Epoch, just like the bribing system has been changed to a more flexible and convenient system. The key to the new bribing system is to expand the convenience of the bribers. Now, you can freely add the token of your choice to the pool of your choice for the desired period as a bribe.

The process is as follows:

1. Select the pool
2. Choose the token to bribe
3. Some tokens require a deposit of 1000 veLVC tokens
4. Set up the bribe distribution period
5. Add the bribe
6.

The added bribe is distributed linearly according to the set period.

Once a bribe has been added, it cannot be canceled, so please proceed with caution.
