Create a wallet with celestia-app

For this guide, we will go over how you can generate a Celestia wallet using celestia-app.

Prerequisites

- Gone through quick start and Installed celestia-app

Note, you do not need to install celestia-node for this tutorial.

Create a wallet

First, create an application CLI configuration file:

sh celestia-appd

config

keyring-backend

test celestia-appd

config

keyring-backend

test You can pick whatever wallet name you want. For our example we used "validator" as the wallet name:

sh celestia-appd

keys

add

validator

--interactive celestia-appd

keys

add

validator

--interactive Save the mnemonic output as this is the only way to recover your validator wallet in case you lose it!

To check all your wallets you can run:

sh celestia-appd

keys

list celestia-appd

keys

list

Fund a wallet

For the public celestia address, you can fund the previously created wallet via Discord by sending this message to either the #mocha-faucet or #arabica-faucet channel:

text request celestia1xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx request celestia1xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx Wait to see if you get a confirmation that the tokens have been successfully sent. To check if tokens have arrived successfully to the destination wallet run the command below replacing the public address with your own:

sh celestia-appd

start celestia-appd

query

bank

balances

celestia1xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx celestia-appd

start celestia-appd

query

bank

balances

celestia1xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx TIP

Refer to [the ports section of the celestia-node troubleshooting page](#) for information on which ports are required to be open on your machine. [][[Edit this page on GitHub]](#) Last updated: [Previous page Upgrade Monitor](#) [Next page Multisig](#) []
