Hi guys,

When compiling the simple_calculator

contract, it seems that it cannot generate contract.wasm

because of this error "linking with rust-lld

failed: exit code: 1" (The same error happens when I compiled the other examples).

You can check full error logs here.

And I tried some ways to rebuild it, such as add option linker "RUSTFLAGS='-C linker=rust-lld' cargo build --release --target wasm32-unknown-unknown --verbose" when recompiling it , but still got same error.

Can you please take a look?
