Hey all, our team at Tortuga Labs is interested in building games on Secret Network as shown in our previous proposal: https://forum.scrt.network/t/grant-application-multi-player-poker-on-scrt/

We appreciate everyone's feedback thus far, and would like to open up a discussion here where we can receive input/advice on reformatting our proposal to be closer to the communities interest level, understanding that we intend to approach Secret Labs first before going back to the community pool. We also would like to gather suggestions and recommendations on features that users would like to see.
