v2 USDC-WETH pool:

- rekt on "impermanent loss"
- if I widthraw liquidity, from a tax perspective, I'm swapping LP token for ETH and USDC tokens for short term cap gains: 50% tax rate. ReKt

My options:

- Say in v2 pool and keep getting rekt on IL
- Withdraw from v2 pool to USDC and ETH: rekt on taxes
- Change to v3 pool: rekt on taxes (it's still a trade from tax perspective!!!1)

Any ideas?
