How to get your token onto Jupiter's Strict List

Once you have listed your token on Orca you may want to take steps to increase exposure and improve your holder's experience.

Listing your token on CoinGecko (see [How to list a new asset with CoinGecko](#)) may help with the process.

Jupiter's documents provide details for how to get your token onto Jupiter's Strict List, which you can find here [Getting Your Token onto Jupiter](#) .

The process includes opening a PR via Github (https://github.com/jup-ag/token-list), you can find sample PRs in the associated Readme here (https://github.com/jup-ag/token-list/blob/main/README.md), this process cannot be bypassed and Orca cannot expedite it on your behalf.
