function-arguments)

- [Example](#)

execute()

```
```

Copy functionexecute(Token[]calldatatokens)external

```
```

Thiswrite function allows any caller to process all available token amounts collected by Carbon DeFi and Arb Fast Lane activities.

The function will process all token amounts incarbonController AND thecarbonVortex contract balance ([view availableTokens](#)).

Function Arguments

Name Type Description tokens List The list of token addresses of the token. Input can be a single token, or an array of addresses.

Example

```
```

Copy execute(0xEeeeeEeeeEeEeeEeEeEeeEEEeeeeEeeeeeeeEEeE// token)

```
```

For the ETH token, use the contract address:0xEeeeeEeeeEeEeeEeEeEeeEEEeeeeEeeeeeeeEEeE [Previous trade()](#) [Next Read Functions](#) Last updated1 month ago
