Hello, i'm not sure I get it right since im fairly new in the Uniswap ecosystem but from what I can see, if you provide liquidity using UNI (Eth/UNI pairing etc) looks like you cant use your UNI token for governance ? Would be nice if providing liquidity with UNI would give some sort of token that has voting rights ? exemple you pool your UNIs, gets vUNI for that time being that exclusively can be used as a governance token ? Would that make sens?
