# Configuration

Clone the [node_tooling repo](#) and descend into the monitoring folder:

```
```

Copy gitclonehttps://github.com/Xiphiar/node_tooling.git cd./node_tooling/monitoring

```
```

In the Prometheus folder, modify cosmos.yaml, replaceNODE_IP with the IP of your node. (If your node is on the docker host machine, use172.17.0.1 )

```
```

Copy nano./prometheus/cosmos.yaml

```
```

Replace the default Prometheus config with the modified cosmos.yaml

```
```

Copy mv./prometheus/prometheus.yml./prometheus/prometheus.yml.orig cp./prometheus/cosmos.yaml./prometheus/prometheus.yml

```
```
