Push Metrics to Obol Monitoring

info This isoptional and does not confer any special privileges within the Obol Network. You may have been provided withMonitoring Credentials used to push distributed validator metrics to Obol's central prometheus cluster to monitor, analyze, and improve your Distributed Validator Cluster's performance.

The provided credentials needs to be added inprometheus/prometheus.yml replacingPROM_REMOTE_WRITE_TOKEN and will look like:

obol20!tnt8U!C... The updatedprometheus/prometheus.yml file should look like:

global: scrape_interval: 30s # Set the scrape interval to every 30 seconds. evaluation_interval: 30s # Evaluate rules every 30 seconds.

remote_write: - url: https://vm.monitoring.gcp.obol.tech/write authorization: credentials: obol20!tnt8U!C...

scrape_configs: - job_name: 'charon' static_configs: - targets: ['charon:3620'] - job_name: "lodestar" static_configs: - targets: ["lodestar:5064"] - job_name: 'node-exporter' static_configs: - targets: ['node-exporter:9100']
