Hi! For my first post I'd like to share with you all what I consider to be the most significant paper on blockchain sharding that I've come across to date: [OmniLedger](#).

If you're into sharding and you haven't read that paper, I strongly recommend you drop what you're doing and read it (as well as any relevant supplementary reading, like the ByzCoin paper).

Hope you find it as exciting as I do. I'm referencing it in a paper I'm writing about the DCS Triangle.
