[Validator set size capping strategies - HackMD](#)

Validator set size capping strategies _Special thanks to Anders Elowsson and Justin Drake for rev

If one of these options came to be the final(Most probably will be the ' variable minimum validator balance', IMO), how will that impact the Lido DAO ecosystem? Should we make a pro-arranged plan for this potential adjustment?

Hope the core team members and advisors can give us some insight views on this topic.[@vsh](#) [@Hasu](#)
