GM! I created a tool to help keep users up to date in web3. For example, this is the newsfeed for Lido[The Lido community | x23.ai](https://x23.ai). It covers governance discussions, snapshot votes, github PRs, and github code repositories.

We use AI to summarise and give context to the information, among other things.

I'd love to hear any feedback and how I can make this more useful and specific for Lido. For example, i do plan to add Easy Track proposals and on-chain proposals eventually, but are there any more pressing/valuable information that the Lido community would need?
